

I already know...

...how girls' and boys' bodies change during puberty and understand the importance of looking after myself physically and emotionally.

...that becoming a teenager involves various changes and also brings growing responsibility.

Male and Female Reproductive Body Parts

We will use words including; penis, testicles, erection, vagina, vulva, urethra, womb, uterus, ovary, labia,

What names do I already know?

Which names are the biologically correct names?

What names are we going to use going forward?

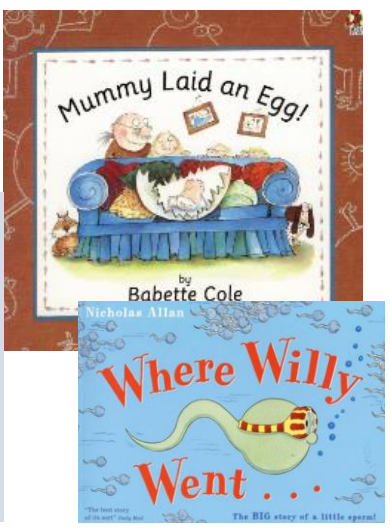

When it is ok to use these words?

What is sexual intercourse and what happens when an egg is fertilized?

A	The sperm travel into the Fallopian tubes.	F	The sperm travel into the woman's vagina.
B	After a while, sperm comes out of the man's penis in a liquid called semen.	G	The man slides his penis into the woman's vagina.
C	The ball of cells keeps dividing and growing a baby is now developing.	H	The new cell divides and grows to make a little bundle of cells which travels down the Fallopian tube to the uterus.
D	The sperm travel through the cervix and into the uterus.	I	The little ball of cells attaches itself to the endometrium.
E	If there is an egg ready in one of the Fallopian tubes, one sperm travels through the outer skin of the egg.	J	The sperm and the egg fuse together and make a new cell that is a mixture of the mother and the father.

Using different resources, we will talk about sexual intercourse and how it can lead to the fertilization of an egg.

I can order the sequence of how a baby is made.

Question Box

You will have a chance to ask any questions through a question box. We will answer anything we are able to if it links with the learning.

How will my feelings, emotions and priorities change with puberty?

Circle time to discuss how our emotions may change through puberty and how they can ebb and flow day to day as well.
